Introduction

We are delighted to release this eighteenth volume of “Unemployment in India, A Statistical Profile”.

Estimates presented here were generated using data collected during household visits between 1 September 2021 and 31 December 2021.

This volume contains statistical profiles of 28 states and union territories.

For each state, we provide estimates of the labour force, labour force participation rate, employed and unemployed persons and the unemployment rate during the September-December 2021 period. These estimates are presented by educational qualification, age and gender of the individuals. Separately, estimates are presented for urban and rural regions of the individual states as well.

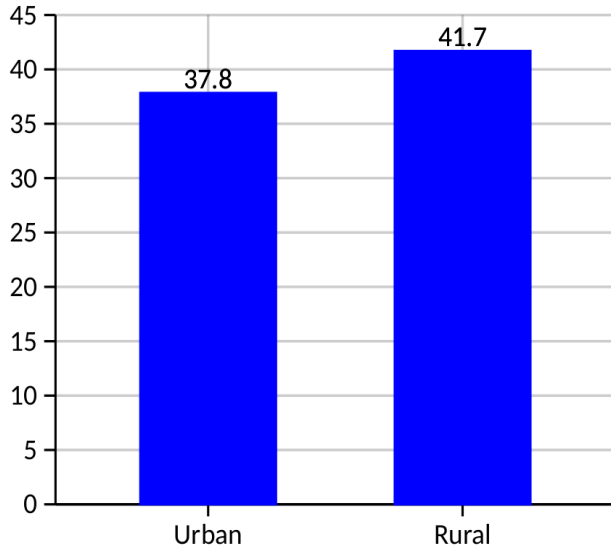

Our effort is to produce these volumes at a faster frequency than is usually attempted in India. Such estimates are made thrice in a year. Further, it is our endeavour to produce the results faster than is usually attempted in India. In this respect our endeavour is to produce such volumes within one month of the completion of the survey. We aim to achieve these without compromising on the size of the survey (it is the largest in the country) and without compromising on the rigour of implementation – this is the most advanced survey execution system in terms of technology application in the country.

Definitions used to estimate labour force, employed and unemployed match with those generally used internationally. With the help of these, while we have estimated the magnitude of the labour force, employed and the unemployed, we have also made estimates of the greater labour force, the greater unemployed and the greater unemployment rate. These estimates will throw new light on the size of the labour force and the size of the unemployed.

Survey Design

The unemployment rate in India is estimated from data collected regarding the employment / unemployment status of all members of 15 years and more of a sample of randomly selected households.

The individuals surveyed are members of a panel of households included in CMIE's Consumer Pyramids survey. Answers to employment / unemployment status questions are administered along with CMIE's Consumer Pyramids survey.

CMIE's Consumer Pyramids panel of households contains over 178,677 households. These include over 522,000 members who are 15 or over 15 years of age. This is the largest sample of households and individuals from whom data is gathered on the employment and unemployment status. In comparison, the National Sample Survey Organisation's 68th Round on employment and unemployment was conducted on a sample of 101,724 households involving 326,810 individuals of 15 or greater than 15 years of age.

While the NSSO completes its survey of 101,724 households in one year, the Consumer Pyramids sample is surveyed in four months.

The Consumer Pyramids survey is conducted all over the country, except in the following north eastern states - Arunachal Pradesh, Nagaland, Manipur, Mizoram, Andaman & Nicobar Islands, Lakshadweep, Dadra & Nagar Haveli, Daman & Diu. The survey covers all other parts of the country.

A stratified multi-stage survey design was deployed by CMIE to draw its sample of households. The Primary Sampling Units (PSUs) were the villages and towns of the 2011 Census. The Ultimate Sampling Units (USUs) were the households from these PSUs.

The broadest level of strata for sampling purpose was the Homogeneous Region (HR), which is a set of neighbouring districts that have similar agro-climatic conditions, urbanisation levels and female literacy. HRs are also approximately of the same

size, except in the north east, where the entire set of north-eastern states is considered as one HR.

The sub-strata are the rural and urban regions within each strata, ie within each HR. The sampling frame for rural PSUs was the list of villages as of the 2011 Census. The sampling frame for urban PSUs was the list of towns as of the 2011 Census.

Since there is much variance in the size of towns, towns within an HR were stratified further on the basis of their size. All towns of an HR were stratified into four strata based on the number of households in 2011, as follows:

- Very large towns with more than 200,000 households in 2011.
- Large towns that had between 60,000 and 200,000 households.
- Medium sized towns with households between 20,000 and 60,000.
- Those with less than 20,000 households were the small towns.

One or more towns were randomly selected from each of these size-bins. A total of 328 towns were selected through this process.

From each of these towns, 21 Census Enumeration Blocks (CEB) were randomly selected. A CEB is a cluster of about 100-125 neighbouring households. Households were then selected through a process of systematic random sampling from each of the CEBs. A total of 8,181 CEBs and 115,247 urban households were selected through this process.

Like the urban sample, the rural sample selection is also a two-staged sampling process. The first step in the design is to select villages and then the final step is to select households. Villages were selected through simple random sampling process. Villages are the PSUs. Households were selected from these through a process of systematic random sampling from each selected village. Rural India is surveyed in 102 HRs. The rural sample comprises 63,430 households from 3,965 villages.

Sample Size & Distribution

The sample size is 178,677 households. Of this, 115,247 are urban households picked from 8,181 CEBs of 328 towns. And, the remaining 63,430 rural households were picked from 3,965 villages. This sample size is the outcome of the sampling methodology and decisions regarding the sample size at the Primary Sampling Units (PSUs) level. The sample size for the urban PSU (a sample town)

is 320 and the CEB within the town is fixed at 8. For the rural PSU (a sample village), the sample size was fixed at 16. The sample households from some CEBs and some villages were increased following a re-balancing of the sample in response to the 2011 Census results. The sample size from some CEBs was raised to 14 or 16. The larger urban sample size reflects the greater diversity in town-size and the approach of the sampling methodology to capture this diversity adequately. The final distribution of the sample is presented below:

State	Urban Sample			Rural Sample		Total Sample
	Towns	CEBs	Households	Villages	Households	Households
Andhra Pradesh	15	428	6,208	191	3,056	9,264
Assam	4	92	1,179	36	576	1,755
Bihar	16	369	5,078	269	4,304	9,382
Chandigarh	1	37	456	0	0	456
Chhattisgarh	9	202	2,864	121	1,935	4,799

Haryana	12	294	4,210	104	1,664	5,874
Himachal Pradesh	2	45	640	40	640	1,280
Jammu & Kashmir	4	81	1,228	85	1,360	2,588
Jharkhand	8	187	2,534	136	2,176	4,710
Karnataka	17	495	7,173	211	3,376	10,549
Kerala	10	228	3,362	89	1,424	4,786
Madhya Pradesh	17	382	5,232	248	3,968	9,200
Maharashtra	37	929	13,626	388	6,208	19,834
Meghalaya	1	21	336	44	704	1,040
Delhi	1	81	880	31	495	1,375
Odisha	12	258	3,737	189	3,024	6,761
Puducherry	3	65	980	31	496	1,476
Punjab	12	314	4,472	143	2,288	6,760
Rajasthan	21	495	7,270	247	3,952	11,222
Tamil Nadu	21	546	7,674	204	3,264	10,938
Telangana	10	336	4,598	113	1,808	6,406
Tripura	2	49	728	29	464	1,192
Uttar Pradesh	45	1,118	15,909	477	7,631	23,540
Uttarakhand	4	85	1,242	50	800	2,042
West Bengal	23	552	6,989	220	3,513	10,502
Sikkim	1	21	336	30	480	816
India	328	8,181	115,247	3,965	63,430	178,677

This sample size was frozen in the Round that began in September 2017 after a re-balancing of the earlier sample following the results of the 2011 Census results. The sample size and its distribution will remain frozen till the next replenishment scheduled for May 2022.

Execution Machinery

Questions related to unemployment are tagged along with the rest of the Consumer Pyramids survey. The execution of the survey for the unemployment estimations are therefore simultaneous and co-terminus with the execution of the Consumer Pyramids survey.

The Consumer Pyramids survey is executed by a door-to-door canvassing of the questionnaire as per a fixed plan. The plan consists of the following steps:

1. The entire sample of 178,677 households is surveyed during a period of four months. This is called a Round. There are three Rounds in a year.
2. Each Round is a Wave. The first Wave was executed during January - April 2016. This is the Wave.
3. The entire sample of about 178,677 households is divided into roughly four equal Slots to be executed in the four months of a Round. Each Slot consists of about 44,669 house-

holds. These are surveyed during a month. Each household is mapped to three Slots that are four months apart each and this mapping remains fixed.

	Slot1	Slot2	Slot3	Slot4
Round1	January	February	March	April
Round2	May	June	July	August
Round3	September	October	November	December

4. Execution during a month is organised into weekly plans. Before the beginning of a week, the precise visits to households of the Slot are fixed.
5. Execution is then monitored for timely execution and for quality.
6. Data is collected from the field on hand-held GPS enabled phone devices. Data from these are uploaded from the field immediately after completion of survey and cross-checked centrally to ensure plausibility of the entries.
7. Execution is tracked using multiple tools - ranging from GPS location tracking, call-backs and ground supervision.
